

Topic: Some people think public libraries are no longer necessary in the digital age. To what extent do you agree or disagree?

Public libraries are often seen as old-fashioned because so much information is now available online. However, I strongly disagree with the idea that they are no longer necessary. Libraries still provide equal access to knowledge, a quiet learning environment, and valuable community services that cannot be fully replaced by digital platforms.

First, libraries remain essential for people who do not have stable internet access or cannot afford expensive books and devices. A public library gives students, job seekers, and elderly residents a free place to read, study, and use computers. Without such spaces, educational inequality would become even more serious.

Second, libraries offer an atmosphere that encourages concentration and independent learning. Although online resources are convenient, they also come with many distractions. By contrast, libraries create a calm environment where people can focus for long periods and receive support from trained staff.

In conclusion, digital technology has changed how people access information, but it has not made public libraries obsolete. They continue to play an important social and educational role, and governments should continue to support them.
